A low-angle, upward-looking photograph of several modern skyscrapers with glass facades. The buildings are reflected in each other, creating a complex geometric pattern of lines and reflections. The sky is a pale, clear blue.

**REGULATORY  
REPORTING**

## INTRODUCTION

Banking is driven by regulatory demands. This is even more true since the 2008 crisis. Ariadne makes it possible to combine the power of business analytics, accounting and regulation. The single financial contract and its expected cash-flows form the basis of any analysis from where we strictly derive every analytic result. This guarantees consistency between the concepts, including regulatory reporting.

## REGULATION AND GRANULAR DATA

Regulation is heading towards granular data. For Ariadne, the granular level (single financial contract view) has always been the starting position. Ariadne allows to calculate and store any analytic results on the single contract level in daily granularity. Specific regulatory reporting criteria can be added on the single contract level. From this basis, any regulatory report can be created via query, selection statements, grouping etc., which is a standard DB functionality.

## SPECIFIC AND AD HOC REGULATORY REPORTS

For standard regulatory reports Ariadne does cooperate with recognized standard reporting tool providers.

More important than standard reports has been the rise of ad hoc reporting. Regulators may request ad hoc reports at any frequency. Ariadne provides the suitable platform for such reporting. Based on the fact, that all analytic results are available for every contract on a daily basis and the availability of the reporting criteria at the same level, it is possible to create any report in the shortest possible time. Ariadne offers a pivot reporting routine with reporting dimensions that can be freely chosen. Reports can be generated with a few drag and drops. This can reduce the costs of creating requested ad hoc reports from the regulator drastically.

## ABOUT ARIADNE

Ariadne is a new initiative in Finance and Risk Management. It is profiting from over 100 combined years of successful entrepreneurial and academic experience of our Ariadne founding partners. Our team combines a unique combination of skills and experience in financial and enterprise risk management, risk software development, finance and risk consulting.

Ariadne was initiated by Willi Brammertz, the lead author of "Unified Financial Analysis". Financial experts consider Willi Brammertz to be the driving force pushing the edges of financial analytics and leading the industry forward.
